The new ARTISAN[®] PRO-FINISHER model HT-1000P is a 220 volt single phase variable speed sanding, buffing and polishing machine with a separate vacuum waste disposal system.

Included with the Finisher are four of the tools shown. You may choose hair brushes, buffing wheels, or abrasive wheels in any combination.

The 1.5 kv motor speed is completely adjustable from 0 to 1800 RPM. An LED read out shows the motors operating speed and is controlled by a digital frequency controller.

The separate dust collection system is operated by 2 powerful additional 1.1kv vacuum motors. All of the waste is first filtered, then ends up in a collection waste bag. Next, the air is then filtered and returned back into the workroom cleaner than it went into the machine.

The Finisher measures 47 inches tall, 40 inches wide, and 27 inches deep.
