## TORO-1020 20 INCH STATIONARY KNIFE LEATHER SPLITTING MACHINE

The ARTISAN® TORO-1020 20 inch Stationary Knife Leather Splitter is a heavy duty tool for splitting and leveling vegetable tanned leathers.

The **New TORO-1020** was inspired from a 100 year old "RANDAL" splitter design. Most all of the parts that make up the new ARTISAN® TORO-1020 splitter are interchangeable with old "Randal's"

One can utilize the splitter to even out various high spots in your hides or to take a thick skin and split it into a much thinner weight piece of leather.

Many choose to use leather from your scrap pile or extra pieces from a previous project, split it into a lighter weight and put the "waste" to a good use. This makes it much easier for a leathersmith to keep a smaller inventory of hides around the shop. Less waste and a higher percentage of leather utilization.

The ARTISAN® TORO-1020 machine is completely adjustable to split very heavy weight vegetable tanned leather such as a piece of 15/16 oz goods into a lighter weight hide of 4/5 oz or even lighter. The weight you require is easily adjustable and the results are impressive.

Telephone ARTISAN® for additional information or ask some one who owns an ARTISAN®. You will be pleased with the answers and the quality of our products and our company!

ARTISAN® machines are backed by our exclusive 24 month limited warranty for your assurance of quality and performance.
